

POLLUTION AND PLANTS

Name:

Experiment #1: Celery in different colored water

What do you think will happen to the celery in the different colored water?

My hypothesis is:

What did you observe at the conclusion of this experiment?

Why do you think this happened?

POLLUTION AND PLANTS

Experiment #2: Celery in various pollutants

What do you think will happen to the celery in salt water?

My hypothesis is:

What do you think will happen to the celery in vinegar water?

My hypothesis is:

What did you observe at the conclusion of this experiment?

Why do you think this happened?

POLLUTION AND PLANTS

Experiment #3: Evapotranspiration of water from plants

Which bag do you think will have the most water in it? Why?

My hypothesis is:

Which bag do you think will have the least water in it? Why?

My hypothesis is:

What did you observe at the conclusion of this experiment?

Why do you think this happened?

Now that you have completed these experiments, what new questions do you have about plants and pollution?
